

AGENDA
Vermont System Planning Committee
Forecasting Subcommittee
March 28, 2017 — 9:30 a.m. to noon
Department of Public Service Giga Room, Montpelier

1. Review/approve minutes of last meeting
2. GMP/Jeff Monder overview of GMP Tier III plan
3. Itron update/check-in
 - Weather – was Keene NH data complete – worth investigating for SE quadrant of state?
 - Can AMI data be obtained?
 - Format for generation data (this comes from request to have “load reducing” hydro reported) — for VPPSA at least need to know what format Itron would like this in — preferably not providing 8760 for last 5-10 years
4. Open questions
 - Energy efficiency
 - Verify that the summer claimed EE savings are still adequate for an 8PM peak hour.
 - Verify how heat pumps are considered in EVT forecasts (Carole H)
 - EE DRP process update: “business as usual forecast” and the likelihood of that being the choice (Carole & John provide VEIC & PSD perspective)
 - What scenarios to model – one suggestion was to use the PSD’s total energy study to develop varying electrification pathways.
 - Vermont-specific economic analysis (John W)
 - Sensitivity, how to treat the solar, storage shape, and storage assumptions.
5. Schedule check-in
 - Are we on track?
 - Next steps/next meeting
